

OGI - Serving a Wide Range of Industries

- Military
- Nuclear
- Injection Molds
- Tool & Die
- Machinery
- Telecommunications
- Instrumentation
- Electronics
- CD Industry
- Pumps
- Mining
- Medical

The OGI Commitment: Quality Craftsmanship With Consistent On-time Delivery

Today's high-tech world of manufacturing demands a high degree of professional excellence from every level of operations. Suppliers must not only deliver precision crafted components, but must do so in a timely and consistent manner. OGI Precision Inc. is committed to providing you with the highest level of Customer Service available in the Custom CNC Machining Industry. Behind every project are highly skilled individuals with decades of hands-on expertise, who have one goal in mind, "Quality Craftsmanship With Consistent On-time Delivery."

OGI Delivers Precision for the Most Demanding Applications

OGI serves a wide range of sophisticated industries requiring nothing less than perfection in every component that is machined. This diverse clientele and their equally diverse range of applications, reflects our ability to meet the demand for high precision, even with the most complicated designs and exotic materials.

CUSTOM CNC MACHINING + TURNING & MILLING

Turning Your Ideas Into Reality

At OGI we have the resources to turn your ideas into reality. This process is seamless from your original sketch or CAD file through to programming, machining and final surfacing. Traceable, stringent, quality control is implemented in every stage of production. Our expertise in Programming ensures that from the very onset, your component will conform to your exact specifications.

State-of-the-Art Machining Centres

Your project begins to take form on our State-of-the-art machinery. OGI's CNC multi-axis lathes are equipped with live tooling. This allows turning and milling to be completed in one operation, thus lowering costs. Our machines are the latest models from Mori Seki, the world's highest rated CNC machine manufacturer. These extremely efficient machining centers, operated by our skilled technicians, enable OGI to deliver high volume precision components within the most demanding of production schedules.

Rely on OGI's Team of Professionals

OGI's main strength is found in our team of professional programmers and on-floor operators, who have, in some cases, experience that spans over 25 years. Our expertise in applications such as precision injection molds and sophisticated titanium components for the nuclear industry are examples of the high level of skill you can rely on.

Prototyping and Full Production

OGI Precision Inc. has provided machining expertise for manufacturers who are in the prototyping phase, as well as full production services for on-going operations. We can contribute valuable insight into the development of your product by recommending the most efficient designs that will maximize through-put and profitability. Once your design is optimized, OGI can meet all your on-going production requirements.

Quality Assurance

At OGI Precision Inc. Quality Assurance is a top priority throughout the entire production process.

We ensure that thorough documentation is kept for all stages, and that procedures are strictly adhered to. All of this is outlined in our Quality Assurance Manual that conforms to ISO standards.

Quality Control utilizing a CMM is available upon request
